

Putting technology in your hands.

When it comes to material science technology, lot-to-lot consistency, on-time delivery and full partnership support, AdvanSource Biomaterials stands apart from the rest.

We understand today's devices are increasingly dependent upon material advancements in order to optimize product performance. As such, we continue to enhance our synthesis and processing capabilities to provide precise characteristics targeted to meet your engineering objectives.

Our products include: polycarbonate-based urethanes; aromatic and aliphatic ether-based elastomers; thermoplastic silicone polycarbonate urethanes; extrudable and solution-based hydrophilic materials; liquid polymers and a full line of antimicrobial products.

The challenges facing the medical industry require innovative materials and collaboration with a consultative technical team. AdvanSource Biomaterials is dedicated to putting this support in your hands and providing you with the building blocks needed to champion your success.
