

Advancing materials at the source.

ASB provides the highest levels of material reliability, consistent product performance and targeted polymer synthesis tailored to optimize the design and development of your medical device initiatives.

As dedicated partners in material science technology, we offer a selection of specialized medical grade polymers ranging from 5 Shore A to 75 Shore D and supporting technical services including prototype coatings, colorant technologies and project management to meet your delivery expectations and project timelines.

Our polyurethane technology includes:

- Antimicrobial materials
- Polycarbonate-based urethanes -aliphatic & aromatic versions available
- Polycarbonate/Silicone TPU Blends
- Polyether-based elastomers - offered in aromatic and aliphatic forms
- Lubricious materials – offered in extrudable and solution-based forms
- Coatings & liquid polymers

ASB...your source for advanced material science technology.
